

Maths Curriculum 2014 - Year 5 Medium Term Planning

Unit 5.1: Large and Negative Numbers in Different Formats

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Number and Place Value	read, write, order and compare numbers to at least 1 000 000 and determine the value of each digit	Number	Pupils identify the place value in large whole numbers. They continue to use number in context, including measurement. Pupils extend and apply their understanding of the number system to the decimal numbers and fractions that they have met so far. They should recognise and describe linear number sequences, including those involving fractions and decimals, and find the term-to-term rule. They should recognise and describe linear number sequences (for example, 3, 3 ½, 4, 4 ½ ...), including those involving fractions and decimals, and find the term-to-term rule in words (for example, add 2 1).
Number and Place Value	round any number up to 1 000 000 to the nearest 10, 100, 1000, 10 000 and 100 000		
Number and Place Value	count forwards or backwards in steps of powers of 10 for any given number up to 1 000 000		
Number and Place Value	interpret negative numbers in context, count forwards and backwards with positive and negative whole numbers, including through zero		
Number and Place Value	read Roman numerals to 1000 (M) and recognise years written in Roman numerals.		
Number and Place Value	solve number problems and practical problems that involve all of the above		

Unit 5.2: Drawing, Measuring and Estimating Angles

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Properties of Shape	know angles are measured in degrees: estimate and compare acute, obtuse and reflex angles	Geometry and Measures	Pupils become accurate in drawing lines with a ruler to the nearest millimetre, and measuring with a protractor. They use conventional markings for parallel lines and right angles. Pupils use the term diagonal and make conjectures about the angles formed between sides, and between diagonals and parallel sides, and other properties of quadrilaterals, for example using dynamic geometry ICT tools. Pupils use angle sum facts and other properties to make deductions about missing angles and relate these to missing number problems.
Properties of Shape	draw given angles, and measure them in degrees (°)		
Properties of Shape	identify: angles at a point and one whole turn (total 360°), angles at a point on a straight line and a ½ a turn (total 180°), other multiples of 90°		

Unit 5.3: Decimals, Equivalence and Rounding

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Fractions (Including Decimals And Percentages)	read and write decimal numbers as fractions (e.g. $0.71 = 71/100$)	Number	<p>Pupils should be taught throughout that percentages, decimals and fractions are different ways of expressing proportions.</p> <p>They extend their knowledge of fractions to thousandths and connect to decimals and measures.</p> <p>Pupils connect equivalent fractions > 1 that simplify to integers with division and other fractions > 1 to division with remainders, using the number line and other models, and hence move from these to improper and mixed fractions.</p> <p>Pupils connect multiplication by a fraction to using fractions as operators (fractions of), and to division, building on work from previous years. This relates to scaling by simple fractions, including fractions > 1.</p> <p>Pupils practise adding and subtracting fractions to become fluent through a variety of increasingly complex problems. They extend their understanding of adding and subtracting fractions to calculations that exceed 1 as a mixed number.</p> <p>Pupils continue to practise counting forwards and backwards in simple fractions.</p> <p>Pupils continue to develop their understanding of fractions as numbers, measures and operators by finding fractions of numbers and quantities.</p> <p>Pupils extend counting from year 4, using decimals and fractions including bridging zero, for example on a number line.</p> <p>Pupils say, read and write decimal fractions and related tenths, hundredths and thousandths accurately and are confident in checking the reasonableness of their answers to problems.</p> <p>They mentally add and subtract tenths, and one-digit whole numbers and tenths.</p> <p>They practise adding and subtracting decimals, including a mix of whole numbers and decimals, decimals with different numbers of decimal places, and complements of 1 (for example, $0.83 + 0.17 = 1$).</p> <p>Pupils should go beyond the measurement and money models of decimals, for example, by solving puzzles involving decimals.</p> <p>Pupils should make connections between percentages, fractions and decimals (for example, 100% represents a whole quantity and 1% is</p>
Fractions (Including Decimals And Percentages)	recognise and use thousandths and relate them to tenths, hundredths and decimal equivalents		
Fractions (Including Decimals And Percentages)	read, write, order and compare numbers with up to three decimal places		
Multiplication and Division	multiply and divide whole numbers and those involving decimals by 10, 100 and 1000		

1/100, 50% is 50/100, 25% is 25/100) and relate this to finding 'fractions of'.

Unit 5.4: Addition and Subtraction

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Addition and Subtraction	add and subtract numbers mentally with increasingly large numbers	Number	Pupils practise using the formal written methods of columnar addition and subtraction with increasingly large numbers to aid fluency (see Mathematics Appendix 1). They practise mental calculations with increasingly large numbers to aid fluency (for example, $12\,462 - 2300 = 10\,162$).
Addition and Subtraction	add and subtract whole numbers with more than 4 digits, including using formal written methods (column addition and subtraction)		
Addition and Subtraction	solve addition and subtraction multi-step problems in contexts, deciding which operations and methods to use and why		
Fractions (Including Decimals And Percentages)	solve problems involving number up to three decimal places		

Unit 5.5: Reflection and Translation

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Position And Direction	identify, describe and represent the position of a shape following a reflection or translation, using the appropriate language, and know that the shape has not changed.	Geometry and Measures	Pupils recognise and use reflection and translation in a variety of diagrams, including continuing to use a 2-D grid and coordinates in the first quadrant. Reflection should be in lines that are parallel to the axes.

Unit 5.6: Primes, Factors, Squares and Cubes

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Multiplication And Division	identify multiples and factors, including finding all factor pairs of a number, and common factors of two numbers	Number	They use and understand the terms factor, multiple and prime, square and cube numbers. They understand the terms factor, multiple and prime, square and cube numbers and use them to construct equivalence statements (for example, $4 \times 35 = 2 \times 2 \times 35$; $3 \times 270 = 3 \times 3 \times 9 \times 10 = 92 \times 10$).
Multiplication And Division	know and use the vocabulary of prime numbers, prime factors and composite (non-prime) numbers		

Multiplication And Division	establish whether a number up to 100 is prime and recall prime numbers up to 19		
Multiplication And Division	recognise and use square numbers and cube numbers, and the notation for squared (²) and cubed (³)		

Unit 5.7: Multiplication

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Multiplication And Division	multiply and divide numbers mentally drawing upon known facts	Number	Pupils practise and extend their use of the formal written methods of short multiplication and short division (see Mathematics Appendix 1). They apply all the multiplication tables and related division facts frequently, commit them to memory and use them confidently to make larger calculations.
Multiplication And Division	multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including long multiplication for two-digit numbers		

Unit 5.8: Solving Problems Using the Four Operations

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Multiplication And Division	divide numbers up to 4 digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context	Number	Pupils practise and extend their use of the formal written methods of short multiplication and short division (see Mathematics Appendix 1). They apply all the multiplication tables and related division facts frequently, commit them to memory and use them confidently to make larger calculations. Pupils interpret non-integer answers to division by expressing results in different ways according to the context, including with remainders, as fractions, as decimals or by rounding (for example, $98 \div 4 = 24 \text{ r } 2 = 24 = 24.5 \approx 25$). 4 98 2 1 Pupils use multiplication and division as inverses to support the introduction of ratio in year 6, for example, by multiplying and dividing by powers of 10 in scale drawings or by multiplying and dividing by powers of a 1000 in converting between units such as kilometres and metres. Distributivity can be expressed as $a(b + c) = ab + ac$.
Multiplication And Division	solve problems involving multiplication and division including using their knowledge of factors and multiples, squares and cubes		
Multiplication And Division	solve problems involving addition, subtraction, multiplication and division and a combination of these, including understanding the meaning of the equals sign		
Multiplication And Division	solve problems involving multiplication and division, including scaling by simple		

	fractions and problems involving simple rates		
Addition and Subtraction	use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy		

Unit 5.9: Using Information from Graphs, Tables and Timetables

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Interpreting data	solve comparison, sum and difference problems using information presented in a line graph	Probability and Statistics	Pupils connect their work on coordinates and scales to their interpretation of time graphs. They begin to decide which representations of data are most appropriate and why.
Interpreting data	complete, read and interpret information in tables, including timetables		

Unit 5.10: Solving Problems with Measures and Time

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Space and time	convert between different units of metric measure (for example, kilometre and metre; centimetre and metre; centimetre and millimetre; gram and kilogram; litre and millilitre)	Geometry and Measures	Pupils use their knowledge of place value and multiplication and division to convert between standard units. Pupils use all four operations in problems involving time and money, including conversions (for example, days to weeks, expressing the answer as weeks and days).
Space and time	understand and use equivalences between metric units and common imperial units such as inches, pounds and pints		
Space and time	solve problems involving converting between units of time		
Space and time	use all four operations to solve problems involving measure [for example, length, mass, volume, money] using decimal notation including scaling		

Unit 5.11: Solving Problems with Fractions

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Fractions (Including Decimals And Percentages)	compare and order fractions whose denominators are all multiples of the same number	Number	<p>Pupils should be taught throughout that percentages, decimals and fractions are different ways of expressing proportions. They extend their knowledge of fractions to thousandths and connect to decimals and measures.</p> <p>Pupils connect equivalent fractions > 1 that simplify to integers with division and other fractions > 1 to division with remainders, using the number line and other models, and hence move from these to improper and mixed fractions.</p> <p>Pupils connect multiplication by a fraction to using fractions as operators (fractions of), and to division, building on work from previous years. This relates to scaling by simple fractions, including fractions > 1.</p> <p>Pupils practise adding and subtracting fractions to become fluent through a variety of increasingly complex problems. They extend their understanding of adding and subtracting fractions to calculations that exceed 1 as a mixed number.</p> <p>Pupils continue to practise counting forwards and backwards in simple fractions.</p> <p>Pupils continue to develop their understanding of fractions as numbers, measures and operators by finding fractions of numbers and quantities.</p> <p>Pupils extend counting from year 4, using decimals and fractions including bridging zero, for example on a number line.</p> <p>Pupils say, read and write decimal fractions and related tenths, hundredths and thousandths accurately and are confident in checking the reasonableness of their answers to problems.</p> <p>They mentally add and subtract tenths, and one-digit whole numbers and tenths.</p>
Fractions (Including Decimals And Percentages)	identify, name and write equivalent fractions of a given fraction, represented visually, including tenths and hundredths		
Fractions (Including Decimals And Percentages)	recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements > 1 as a mixed number (e.g. $\frac{2}{5} + \frac{4}{5} = \frac{6}{5} = 1 \frac{1}{5}$)		
Fractions (Including Decimals And Percentages)	add and subtract fractions with the same denominator and denominators that are multiples of the same number		
Fractions (Including Decimals And Percentages)	multiply proper fractions and mixed numbers by whole numbers, supported by materials and diagrams		

		They practise adding and subtracting decimals, including a mix of whole numbers and decimals, decimals with different numbers of decimal places, and complements of 1 (for example, $0.83 + 0.17 = 1$). Pupils should go beyond the measurement and money models of decimals, for example, by solving puzzles involving decimals. Pupils should make connections between percentages, fractions and decimals (for example, 100% represents a whole quantity and 1% is $1/100$, 50% is $50/100$, 25% is $25/100$) and relate this to finding 'fractions of'.
--	--	---

Unit 5.12: Metric Measurements in Shapes

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Space and Time	measure and calculate the perimeter of composite rectilinear shapes in centimetres and metres	Geometry and Measures	Measure and calculate the perimeter of composite rectilinear shapes in centimetres and metres Calculate and compare the area of rectangles (including squares), and including using standard units, square centimetres (cm^2) and square metres (m^2) and estimate the area of irregular shapes Pupils calculate the perimeter of rectangles and related composite shapes, including using the relations of perimeter or area to find unknown lengths. Missing measures questions such as these can be expressed algebraically, for example $4 + 2b = 20$ for a rectangle of sides 2 cm and b cm and perimeter of 20cm. Pupils calculate the area from scale drawings using given measurements.
Space and Time	calculate and compare the area of rectangles (including squares), and including using standard units, square centimetres (cm^2) and square metres (m^2) and estimate the area of irregular shapes		
Space and Time	estimate volume [for example, using 1 cm^3 blocks to build cuboids (including cubes)] and capacity [for example, using water]		

Unit 5.13: Fractions and their Decimal and Percentage Equivalents

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Fractions (Including Decimals And Percentages)	recognise the per cent symbol (%) and understand that per cent relates to "number of parts per hundred", and write percentages as a fraction with denominator hundred, and as a decimal fraction	Number	Pupils should be taught throughout that percentages, decimals and fractions are different ways of expressing proportions. They extend their knowledge of fractions to thousandths and connect to decimals and measures. Pupils connect equivalent fractions > 1 that simplify to integers with division and other fractions > 1 to division with remainders, using the

Fractions (Including Decimals And Percentages)

solve problems which require knowing percentage and decimal equivalents of $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{2}{5}$, $\frac{4}{5}$ and those with a denominator of a multiple of 10 or 25

number line and other models, and hence move from these to improper and mixed fractions.

Pupils connect multiplication by a fraction to using fractions as operators (fractions of), and to division, building on work from previous years. This relates to scaling by simple fractions, including fractions > 1 .

Pupils practise adding and subtracting fractions to become fluent through a variety of increasingly complex problems. They extend their understanding of adding and subtracting fractions to calculations that exceed 1 as a mixed number.

Pupils continue to practise counting forwards and backwards in simple fractions.

Pupils continue to develop their understanding of fractions as numbers, measures and operators by finding fractions of numbers and quantities.

Pupils extend counting from year 4, using decimals and fractions including bridging zero, for example on a number line.

Pupils say, read and write decimal fractions and related tenths, hundredths and thousandths accurately and are confident in checking the reasonableness of their answers to problems.

They mentally add and subtract tenths, and one-digit whole numbers and tenths.

They practise adding and subtracting decimals, including a mix of whole numbers and decimals, decimals with different numbers of decimal places, and complements of 1 (for example, $0.83 + 0.17 = 1$).

Pupils should go beyond the measurement and money models of decimals, for example, by solving puzzles involving decimals.

Pupils should make connections between percentages, fractions and decimals (for example, 100% represents a whole quantity and 1% is $\frac{1}{100}$, 50% is $\frac{50}{100}$, 25% is $\frac{25}{100}$) and relate this to finding 'fractions of'.

Unit 5.14: Identifying shapes

Topic	Key Concepts	Strand	Notes/Non-statutory guidance
Properties of shape	use the properties of rectangles to deduce related facts and find missing lengths and angles	Geometry and Measures	Pupils become accurate in drawing lines with a ruler to the nearest millimetre, and measuring with a protractor. They use conventional markings for parallel lines and right angles. Pupils use the term diagonal and make conjectures about the angles formed between sides, and between diagonals and parallel sides, and other properties of quadrilaterals, for example using dynamic geometry ICT tools. Pupils use angle sum facts and other properties to make deductions about missing angles and relate these to missing number problems.
Properties of shape	distinguish between regular and irregular polygons based on reasoning about equal sides and angles.		
Properties of shape	identify 3-D shapes, including cubes and other cuboids, from 2-D representations
